## Ustream broadcast videos to youtube from iphone

Ustream Live Broadcaster lets you share real-time video with the world. The race is over. Ustream Live Broadcaster is the first app that can stream live video from iPhone to internet. It's free and works. Will society ever be the same? History may well record that Knocking Live, which debuted with fanfare last week, was the iPhone's first video streaming app. But only other iPhone users can view feeds; Ustream lets the world tune in. In fact, if you are unfamiliar with the service, Ustream allows anyone with a webcam to broadcast live video to a private or public audience. In this case, your iPhone will act as a webcam; all you need is Wi-Fi or 3G. (If no connection is available, you can save your video and upload it to the service later.) And speaking of 3G, the app works with both iPhone 3G and 3GS – impressive because the first one can't record video on its own. Other benefits include a nifty in-flight query option (just tap on your screen and viewers can instantly log a yes or no audio), share a video via Ustream and/or YouTube and Facebook, Twitter integration, and even the ability to share your GPS location. In my quick tests of the Ustream app (on a Wi-Fi network), it worked flawlessly – although since it doesn't turn off the automatic shutdown feature on your iPhone, you need to tap the screen so often (or disable the feature yourself before starting streaming). It will be interesting to see how people end up using – and I suspect, abusing – this powerful ability. Ustream turns an iPhone into a small TV studio capable of sending live events anytime, anywhere. Which begs the question: is this causing new privacy concerns? We already live in a society that describes everything. By adding live video to the mix, are we sacrificing even more privacy? I don't have an answer, but I'd like us to talk. If you are looking for the best streaming and broadcast apps for iOS devices, here you can see the top 10 streaming and broadcast apps for iPhone and other iOS devices. These streaming apps are very useful for connecting with viewers and following a fan to become popular on the Internet.
